RED LIST BUILDING MATERIALS

As per your request, to confirm that our copper tube does not contain any materials on the Red List Building Materials.

The Red List Building Materials include:

- Asbestos
- Cadmium
- Chlorinated Polyethylene and Chlorosulfonated Polyethylene
- Chlorofluorocarbons (CFCs)
- Chloroprene (Neoprene)
- Formaldehyde (added)
- Halogenated Flame Retardants
- Hydrochlorofluorocarbons (HCFCs)
- Lead (added)
- Mercury
- Petrochemical Fertilizers and Pesticides
- Wood treatments containing Creosote, Arsenic or Pentachlorophenol

Due to the fact that Lead, Mercury and Cadmium are all naturally occurring materials in the Earth's crust and manufacturing of copper tube involves the use of naturally occurring materials such as copper, they can exist at very minute traces in the ppm/ppb (parts per million and parts per billion) and can be considered insignificant.

None of the other materials on the list are present in our copper tube.
